

IT'S A UNIQUE ALARM ACTIVATED VOICE ALERT SYSTEM!

Model VA100

Fire Warning Alert System With Custom Message Recording Complements Your Current Smoke Alarm

The VoiceAlert employs patented technology to detect the standard smoke alarm signal and wirelessly trigger the receiver unit to play a crystal clear pre-recorded voice message. Fitted alongside your current smoke alarm, the VoiceAlert is quick and easy to install, with the 90dB receiver ensuring the voice message is loud, clear and as close to the bedside as possible.

Residential fire is a major cause of fire fatalities, with a large majority of fatal fires occurring at nighttime. Studies have shown that only 6% of children (aged 6-15) will wake up reliably to a standard smoke alarm's high pitched beeping signal and that smoke alarms sounding for up to 3 minutes failed to wake over 85% of children.

Transmitter
FA-20

Receiver
FA-10

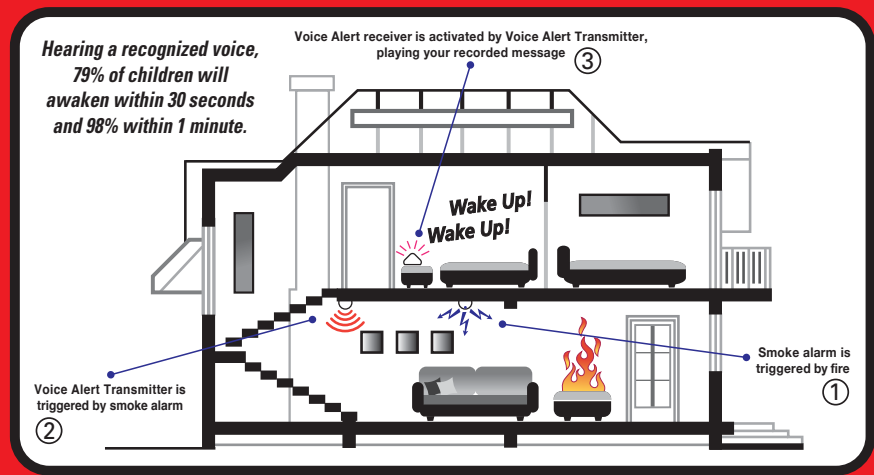

This is a transmitter and single receiver/speaker pack. Additional speakers may be purchased separately for use within 100 yards of this transmitter.
